

## COUNT ON PURITAN® AND PURSWAB® PRODUCTS TO DELIVER EXACTLY WHAT YOU NEED.

See below for an overview of Puritan's and PurSwab's wide array of product categories. If you don't see the applicator you need, please contact us, and we'll custom-design one to meet your requirements.

### COTTON-TIPPED APPLICATORS

Puritan uses only cotton grown in the U.S. We card and coil our own high-quality, USP-grade cotton fiber to ensure consistency of the formed cotton tip on each and every applicator. Select from a variety of applicator sizes, tip shapes, and shaft materials to meet medical and diagnostic needs. Our non-sterile products are available in autoclavable bags for sterile applications.

### POLYESTER-TIPPED APPLICATORS

Synthetic applicator tips are made of medical-grade polyester that we card ourselves. They're non-absorbent and contain no fatty acids or latent sugars, making them ideal in laboratory settings and for inclusion in many diagnostic kits.

### RAYON-TIPPED APPLICATORS

Ideal for diagnostic specimen collection, wound treatment, and application of medicines. Tips are made from the finest USP grades of rayon fiber, which we card in our Guilford facility.

### CALGISWAB® CALCIUM ALGINATE-TIPPED APPLICATORS

These speciality applicators are tipped with calcium alginate fiber, an organic material derived from seaweed, carded in Puritan's facility to assure conformance with medical device specifications. Calgiswab applicators are available in a variety of tip sizes and shaft materials and dimensions. Commonly used for specimen collection in pediatrics, E.N.T., asymptomatic GC, public health microbiology, ophthalmology, food pathology, and other areas where fine tips, flexible shafts, or biodegradable fibers are desirable.

### FOAM-TIPPED APPLICATORS

These sterile applicators are ideal for a variety of clinical and DNA applications. Tips are made of medical-grade foam. Available in a range of shapes and shaft materials.

### WOUND MEASUREMENT DEVICES

The soft foam-tipped applicator is flexible to conform to wound shape and features a metric rule for easy measuring. Perfect for forensics, emergency rooms, long-term care, and more. Available in sterile or non-sterile.

### POPULE® SELF-SATURATING SWABS

Only Puritan can offer you the convenience of swab and solution in one neat unit – and it's non-glass for safety. Specify one of our standard solutions or let us know what you need. Our Popules can be filled with virtually any type of liquid.

### TRANSPORT TUBE AND CAP-SHURE® APPLICATORS

Each of our transport tube applicators has a sterile, rigid tube that protects the swab and keeps it dry before and after sampling, plus there's a label on the tube for easy identification. The swab can be secured in the handle end or simply placed in the tube. Polyester-tipped applicators in transport tubes are available in single and double packs, and foam-tipped applicators are available in single packs. Other fibers can be custom ordered.

Our cotton-tipped Cap-Shure applicators are well-suited for forensic or clinical use. The Cap-Shure swab comes with either a wooden or plastic handle. The aerated cap allows the sample to air dry and protects it from contamination. It's ideal for collecting minute samples at crime scenes or for use as a buccal swab anytime PCR will be used.

### TONGUE DEPRESSORS

Puritan tongue depressors come in plain, wrapped, flavored, and sterile styles. Tongue depressors can serve many functions, from a clinical diagnostic aid to a stirrer for liquid medicines. Customized imprinting and packaging available for some styles.

[see other side for additional products]

### APPLICATOR STICKS

Choose the right size and shape for your applications. Utilize for specimen transfer, as mixing rods, for laboratory applications, and other general-purpose functions. Made with straight-cut ends.

### CUTICLE/ORANGE STICKS

Single- and double-bevel ends offer plenty of choices to suit a variety of needs. Excellent for long-term care and podiatry practices. Good as an all-purpose stick in most types of clinical, diagnostic, and forensic settings, as well as electronics and beauty applications.

### MEDICAL SPOONS

Count on the consistent quality of our medical spoons. Excellent as an aid in dispensing wet medication mixtures. Also very useful for general purposes in healthcare and industrial environments.

### MICROFIBER-TIPPED APPLICATORS

Soft, finely woven, lint-free microfiber cloth effectively traps small particles and is low in NVRs. The twisted pole tip, specifically designed for fiber optics, is thermally affixed to the shaft without contaminating adhesives and can be easily spun during the cleaning process. Microfiber is excellent for optics and lenses.

### POLYESTER-TIPPED APPLICATORS

Non-abrasive, lint-free polyester provides good wear-resistance. These applicators can be used with deionized water, isopropyl alcohol, or solvents. Our laundered polyester is low in NVRs and particle generation.

### CYTOLOGY COLLECTION DEVICES

Puritan cytology products are made to maximize cell collection, while enhancing patient comfort. The Puritan CerviSoft® offers gentle specimen sampling for Pap smear tests.

### OB/GYN AND PROCTOSCOPIC APPLICATORS

No one has a more complete line of standard and specialty applicators than Puritan. Count on our OB/GYN and proctoscopic applicators for consistent quality and dependable performance.

### CERVICAL SCRAPERS

For many years, healthcare professionals have been relying on Puritan for standard wooden cell collection devices, such as cervical scrapers. Along with our more recently developed cytology collection devices, we offer the clinician a complete line of single-use wooden products.

### FOAM-TIPPED APPLICATORS

Soft, lint-free foam tips feature reticulated open cells for superior entrapment of small particles. Most styles are thermally bonded to the shaft, using no contaminating adhesives. Our new glass-filled polypropylene handles provide extra rigidity.
