Quick Start Instructions

Step 1

SEAT BELT PLACEMENT
- Unscrew one screw on either side of the wheelchair that holds the seat in place.
- Attach seat belt to the chair by lining up the grommet holes with the screw holes. Re-insert screws through both the seat belt and the chair to hold seat belt in place. Make sure that the screws are tightened.
- Adjust Seat Belt to desired length by using the black buckle that holds the adjustment strap in place.
- Place monitor out of reach of the resident. Suitable mounting location is the back of wheelchair, so that the resident cannot tamper with monitor or reach the “Reset” button.

Step 2

PLUG IN SEAT BELT
- Plug the Seat Belt into the bottom of the desired fall alarm monitor.
- Be sure to lace the cord through the strain relief by gently pinching the cable into a loop and lacing it over the “T-shaped” strain relief.

Step 3

ADJUST SETTINGS
- To adjust the volume, tone and delay, open the battery compartment in the back of the monitor to access the controls.
- Use a small screwdriver to adjust the volume to the desired level. Please note that the monitor will be shipped with the alarm volume set at 90 decibels (90 decibels is the legally accepted occupational noise allowance).
- Slide tone switch to the desired 3, 2 or 1 beep’s.
- Delay comes set at 0 seconds. If caregiver deems it safe and necessary to have a delay, slide the switch to 1 or 2 seconds.

Step 4

TEST SYSTEM
- Buckle and Unbuckle the Seat Belt to set off the alarm.
- The monitor is now active. Alarm will sound whenever the Seat Belt is unbuckled.
- When the alarm is activated press the “Reset” button. This will shut down the alarming mode.

Step 5

TAMPER PROOF MONITOR
- To disarm the “Reset” button, slide switch on the side of the monitor to Caregiver Key™ (patent pending) on. This allows only the caregiver to turn off the monitor using the Caregiver Key™ (patent pending) by passing the key over the blue circle on the monitor marked “Caregiver Key.”

TL-2109 Seat Belt Monitoring System

Warning: Failure to comply with warning may result in injury or death. This device is not suitable for all individuals. Other devices may be required. TL-2109 Seat Belt Monitoring System

The Wheelchair Seat Belt reduces falls by triggering a fall alarm when the "one-finger" easy release buckle is unbuckled. When the Wheelchair Seat Belt is unbuckled, an alarm sounds so that the caregiver can attend to the resident. The Wheelchair Seat Belt is for use with the TL-2100 Series Fall Alarm Monitors. The easy release buckle preserves resident's freedom of movement by not acting as a restraint. The Wheelchair Seat Belt's metal-reinforced ends make installation easy and secure. The Seat Belt is adjustable up to 54" and longer belts are available by special order. The Wheelchair Seat Belt has a One Year Warranty.

TL-2109 Contents:
- "One-finger" easy release buckle
- 54" adjustable belt
- Metal ends for secure installation

TL-2109 Optional Accessories (sold separately):
- Safety auto-reset Fall Alarm Monitor (TL-2100)
- Economy Fall Alarm Monitor (TL-2100E)
