Introduction

About this document

This document is written for clinical professionals with a working knowledge of medical procedures and terminology required for monitoring cardiac patients.

Before using the electrocardiograph for clinical applications — or before setting up, configuring, troubleshooting, or servicing the electrocardiograph — you must read and understand this document and all other information that accompanies the electrocardiograph and related options or accessories.

Intended use

The Welch Allyn CP150™ is an electrocardiograph used to process the electrical signal transmitted through two or more electrocardiograph electrodes and to produce a visual display of the electrical signal produced by the heart.

The CP150™ Electrocardiograph is specifically intended for acquiring and printing ECG signals from adults and pediatric patients. It will be used in clinical settings by trained healthcare providers. The optional interpretation algorithm analyzes these ECG signals to generate measurements and interpretive statements. The interpretive results are intended only as guidance for qualified physicians and must not be relied upon as diagnoses.

Indications for use

The electrocardiograph is one of the tools that clinicians use to evaluate, diagnose, and measure patient cardiac function.

The 12-lead optional interpretation algorithm provides a computer-generated analysis of potential patient cardiac abnormalities, which must be confirmed by a physician with other relevant clinical information.

Contraindications

The electrocardiograph has no known contraindications.

Description

- The electrocardiograph is not suitable for direct cardiac application.
- The electrocardiograph allows users to perform 12-lead ECG measurements and analysis.
• The electrocardiograph supports STAT, Auto, and Rhythm test types.
• The electrocardiograph provides the ability to print test records on an internal printer.
• The electrocardiograph provides the ability to send test records and analysis directly to an electronic medical records (EMR) system.
• The electrocardiograph allows storage of test records in device memory, external storage media, and external software applications.
• The electrocardiograph allows users to enter patient demographic data into the electrocardiograph memory to be recalled for a test later that day.

Features

Pacemaker detection

The software detects the possible presence of a pacemaker. If you confirm that the patient has a pacemaker, the ECG report includes no interpretation, and it indicates that a pacemaker was detected.

WiFi connectivity (optional)

The optional WiFi capability allows for wireless connectivity and enhanced workflow alternatives. Reduces the reliance on a wired connection.

DICOM format support (optional)

The optional DICOM capability enables direct communication with PACS and EMR systems. Acquire worklist orders and share 12-lead ECG waveforms with the recipient system to enhance workflow efficiency.

Automatic ECG interpretation (optional)

The optional MEANS interpretation algorithm, developed by the University of Rotterdam in the Netherlands, provides automatic analysis of ECG tests. For more information, see the MEANS Physicians’ Manual or the PEDMEANS Physicians’ Manual on the CD that came with your electrocardiograph. The MEANS algorithm is used for adult patients 18 years and older. The PEDMEANS algorithm is used for pediatric patients from 1 day through 17 years old.

CAUTION Check for the presence of a pacemaker before using ECG with interpretation.

WARNING A computer generated interpretation cannot replace sound medical reasoning by a trained professional. Therefore, a physician should always review the interpretation.

Spirometry (optional)

The CP 150 spirometry option allows the user to acquire, view, store, and print, measures and waveforms of pulmonary function including, but not limited to, maximal volume and flow of air that can be moved in and out of a patient’s lungs. These
measures are used in the diagnosis and monitoring of lung diseases and interventions for the treatment of certain lung diseases.

## Configuration options for CP150 electrocardiograph

Symbols

Documentation symbols

**WARNING** The warning statements in this manual identify conditions or practices that could lead to illness, injury, or death.

**Caution** The caution statements in this manual identify conditions or practices that could result in damage to the equipment or other property, or loss of data. This definition applies to both yellow and black and white symbols.

Consult directions for use (DFU). A copy of the DFU is available on this website. A printed copy of the DFU can be ordered from Welch Allyn for delivery within 7 calendar days.

Meets essential requirements of the European Medical Device Directive 93/42/EC

General warnings

Warnings indicate conditions or practices that could lead to illness, injury, or death.

Warnings related to the environment

**WARNING** The power cord is considered the disconnect device for isolating this equipment from supply mains. Do not position the equipment so that it is difficult to reach or disconnect.

**WARNING** To avoid a possible explosion, do not use the electrocardiograph in the presence of flammable anesthetics: mixtures containing air, oxygen, or nitrous oxide.

**WARNING** When transporting the electrocardiograph on a cart, tuck the patient cable away to keep them clear of the wheels and to minimize trip hazards.

Warnings related to accessories and other equipment

**WARNING** To avoid the risk of electric shock, this equipment must only be connected to a supply mains with protective earth.

**WARNING** For operator and patient safety, peripheral equipment and accessories that can come in direct patient contact must be in compliance with all appropriate safety, EMC, and regulatory requirements.

**WARNING** All signal input and output (I/O) connectors are intended for connection of only devices complying with IEC 60601-1, or other IEC standards (for example, IEC 60950), as appropriate to the device. Connecting additional devices to the electrocardiograph might increase chassis or patient leakage currents.

**WARNING** The electrocardiograph has not been designed for use with high-frequency (HF) surgical equipment and does not protect against hazards to the patient.

**WARNING** Defective batteries can damage the electrocardiograph. Visually inspect the battery at least monthly, if the battery shows any signs of damage or cracking, it must be replaced immediately and only with a battery approved by Welch Allyn.

**WARNING** Improper disposal of batteries may create an explosion or contamination hazard. Never dispose of batteries in refuse containers. Always recycle batteries according to local regulations.

**WARNING** All signal input and output (SIP/SOP) connectors should not be contacted by patient directly and indirectly through the user during operation.

**WARNING** Use only parts and accessories, including thermal paper, that were supplied with the device and available through Welch Allyn. The use of accessories other than those specified may result in degraded performance or unsafe use of this device.
Warnings related to using the electrocardiograph

**WARNING** No modification of this equipment is allowed.

**WARNING** This device captures and presents data reflecting a patient’s physiological condition. When reviewed by a trained physician or clinician, this data can be useful in determining a diagnosis. However, the data should not be used as a sole means for determining a patient’s diagnosis or prescribing treatment.

**WARNING** To provide CF protection use only accessories approved by Welch Allyn. Visit www.welchallyn.com. The use of any other accessories can result in inaccurate patient data, can damage the equipment, and can void your product warranty.

**WARNING** To avoid serious injury or death, take these precautions during patient defibrillation:
- Avoid contact with the electrocardiograph, patient cable, and patient.
- Verify that the patient leads are properly connected.
- Place defibrillator paddles properly in relation to electrodes.
- After defibrillation, pull each patient lead out of the patient cable and inspect the tips for charring (black carbon marks). If there is any charring, the patient cable and individual leads must be replaced. If there is no charring, fully reinsert the leads into the patient cable. (Charring can occur only if a lead is not fully inserted into the patient cable before defibrillation.)

**WARNING** To prevent the spread of infection, take these precautions:
- Dispose of single-use components (for example, electrodes) after using them once.
- Regularly clean all components that come in contact with patients.
- Avoid ECG testing for patients with open, infectious sores.

**WARNING** Avoid positioning any leads or cables so that they could easily trip someone or become wrapped around a patient’s neck.

**WARNING** To ensure safe use of the device, follow the documented maintenance procedures.

**WARNING** Only qualified service personnel should attempt to repair the electrocardiograph. In case of a malfunction, call Technical Support.

**WARNING** Do not perform ST segment analysis on the ECG screen display, since these ECG representations are scaled. Make manual measurements of ECG intervals and magnitudes on printed ECG reports only.

**WARNING** To maintain diagnostic accuracy and to comply with IEC 60601-02-51 and IEC 60601-02-25, do not scale (re size) when sending a saved ECG to an external printer.

**WARNING** To avoid injury, do not touch the print head immediately after printing. It might be hot.
WARNING To avoid the risk of associating reports with the wrong patients, make sure that each test identifies the patient. Do not save a test to the patient record without patient identification associated with the report.

General cautions

Cautions indicate conditions or practices that could damage the equipment or other property.

CAUTION Federal US law restricts sale of the device identified in this manual to, or on the order of, a licensed physician.

CAUTION When removing the electrocardiograph from storage, allow it to thermally stabilize to surrounding environmental conditions before using it.

CAUTION To prevent possible damage, do not use sharp or hard objects to press the touch screen or the buttons. Only use fingertips.

CAUTION Do not expose the patient cable to strong ultraviolet radiation.

CAUTION Do not pull or stretch the patient cable. Doing so could result in mechanical or electrical failures. Form the patient cable into a loose loop before storing.

CAUTION Avoid positioning the patient cable where it might get pinched, stretched, or stepped on. Otherwise, measurements might no longer be accurate, and repair might be necessary.

CAUTION Using the equipotential terminal for anything but grounding purposes may contribute to damage of the device.

CAUTION Portable and mobile RF communications equipment can affect the performance of the electrocardiograph.

CAUTION The electrocardiograph meets the Class A requirements of IEC 60601-1-2 regarding incidental emission of radio frequency interference. As such it is suitable for use in commercial grade electrical environments. If the electrocardiograph is used in residential grade electrical environments and you experience incidental interference with other equipment that uses radio frequency signals to operate, minimize the interference.

CAUTION Other medical equipment—including but not limited to defibrillators, ultrasound machines, pacemakers, and other stimulators—may be used simultaneously with the electrocardiograph. However, such devices may disturb the electrocardiograph signal.

CAUTION The power cord must be disconnected from AC power before cleaning, maintaining, transporting, or servicing.
CAUTION The requirements of AAMI EC11, Section 3.2.7.2, Frequency and Impulse Response, for an impulse triangle waveform may be impacted by up to 5 milliseconds of small amplitude dampened ringing immediately after the impulse when the muscle filter (35 Hz) is turned on or a small amplitude offset when the baseline filter (0.5 Hz) is turned on. These filters, in any combination turned on or off, meet the AAMI requirements. Measurements performed by the optional interpretation algorithm are unaffected by any filter selections.

Note The entire patient cable, up to and including the electrodes are considered to be an Applied Part.
Setup

Connecting the patient cable

WARNING Do not allow the conductive parts of the patient cable, electrodes, or associated connections of defibrillation-proof applied parts, including the neutral conductor of the patient cable and electrodes, to come into contact with other conductive parts, including earth ground. Otherwise, an electrical short might result, risking electric shock to patients and damage to the device.

WARNING To avoid injury to the patient or damage to the device, never plug patient leads into any other device or wall outlet.

WARNING To provide CF protection use only accessories approved by Welch Allyn. Visit www.welchallyn.com. The use of any other accessories can result in inaccurate patient data, can damage the equipment, and can void your product warranty.

CAUTION Always connect the patient cable and the leads properly during defibrillation. Otherwise, the connected leads could be damaged.

Loading the thermal paper

The electrocardiograph prints on z-fold thermal paper.

- Store the paper in a cool, dry, dark place.
- Do not expose it to bright light or UV sources.
- Do not expose it to solvents, adhesives, or cleaning fluids.
- Do not store it with vinyls, plastics, or shrink wraps.
Powering the electrocardiograph

The electrocardiograph runs on AC or battery power. Plug the electrocardiograph into AC power as often as possible so that the built-in charger can keep the battery charged. Regardless of the battery condition, you can use the electrocardiograph whenever it is plugged in.

**WARNING** When you use AC power, always plug the electrocardiograph into a hospital-grade outlet to avoid the risk of shock.

**WARNING** If the integrity of the building's safety ground is in doubt, operate this device on battery power to avoid the risk of shock.

To turn on or turn off

Press

Press

Press
Secure the AC power cord around the cord wrap of the mobile stand

**Note** To avoid stress on the AC power connection, loop the power cord around the mobile stand cord wrap.

**WARNING** When you use AC power, always plug the electrocardiograph into a hospital-grade outlet to avoid the risk of shock.

**WARNING** When transporting the electrocardiograph on a cart, tuck the patient cable away to keep them clear of the wheels and to minimize trip hazards.

**WARNING** Avoid positioning any leads or cables so that they could easily trip someone or become wrapped around a patient’s neck.

Welch Allyn recommends looping the power cord around the mobile stand cord wrap as shown.

---

Verifying proper operation

To ensure the accuracy of test data, you should verify proper operation of the electrocardiograph before it is used for the first time with patients. You should reverify proper operation once a year.

**To verify proper operation**

1. Use an ECG simulator to acquire and print a standard 12-lead ECG of known amplitude and rate.

2. Look for the following indications of proper operation:
   - Printing should be dark and even across the page.
   - There should be no evidence of print-head dot failure (no printing breaks forming horizontal streaks).
• Thermal paper should move smoothly and consistently during printing.
• The waveforms should have no distortion or excessive noise.
• The amplitude and rate of the waveforms should match the input value from the ECG simulator.
• Z-fold thermal paper should stop with perforations near the tear bar, indicating proper cue-sensor operation.

3. If you see any indications of improper operation, contact Welch Allyn Technical Support.
The ECG home screen includes the following areas:

<table>
<thead>
<tr>
<th>Item</th>
<th>Area</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Device status</td>
</tr>
<tr>
<td>2</td>
<td>Content</td>
</tr>
<tr>
<td>3</td>
<td>Navigation</td>
</tr>
</tbody>
</table>

**Device status area**

The Device status area, located at the top of the ECG home screen, displays:

- Patient Icon and Patient name. Once the patient context is established, the format of the Patient name appears as last name, first name.
- Time and date
- Connectivity status. The icons indicate which connection type, if any, is currently active.
• Battery status
• Error or information messages. These items are displayed until the condition has been resolved.

Content area

The Content area includes 3 test selection buttons and a preview selection button:
• Auto ECG
• Rhythm ECG
• Stat ECG
• Electrode Placement (ECG preview)

The content area also provides shortcuts to several controls.

About the test types

<table>
<thead>
<tr>
<th>Test Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto ECG</td>
<td>A report typically showing a 10-second acquisition of 12 leads of ECG information combined with patient data, measurements, and optional interpretation.</td>
</tr>
<tr>
<td>Rhythm ECG</td>
<td>A continuous, real-time printout of rhythm strips with a user-defined lead configuration. Rhythm ECGs are printouts only. They cannot be saved.</td>
</tr>
<tr>
<td>Stat ECG</td>
<td>An auto ECG that starts without waiting for you to enter patient data. Patient data does not appear.</td>
</tr>
</tbody>
</table>

WARNING To avoid the risk of associating reports with the wrong patients, make sure that each test identifies the patient. Do not save a test to the patient record without patient identification associated with the report.

Navigation area

The Navigation area includes the following tabs:
• ECG home: Displays ECG test types and provides shortcuts to several controls.
• Manage worklist: Includes patient data and orders downloaded when connected to a hospital information system (Worklist server).
• Saved tests: Accesses the patient ECG tests.
• Settings: Accesses device configuration settings.

To navigate to a tab, touch the tab in the Navigation area with the corresponding name. The active tab is highlighted.
Example ECG report
ECG tests

Attach the leads to the patient

Proper lead attachment is important for a successful ECG. The most common ECG problems are caused by poor electrode contact and loose leads. Follow your local procedures for attaching the leads to the patient. Here are some common guidelines.

**WARNING** Electrodes can cause allergic reactions. To avoid this, follow the electrode manufacturer’s directions.

**To attach the leads to the patient**

1. Prepare the patient.
   - Describe the procedure. Explain the importance of holding still during the test. (Movement can create artifact.)
   - Verify that the patient is comfortable, warm, and relaxed. (Shivering can create artifact.)
   - Put the patient in a reclining position with the head slightly higher than the heart and legs (the semi-Fowler’s position).

2. Select the electrode locations. (See the “Electrode locations” chart.)
   - Look for flat areas.
   - Avoid fatty areas, bony areas, and major muscles.

3. Prepare the electrode locations.
   - Shave or clip the hair.
   - Thoroughly clean the skin, and lightly rub it dry. You may use soap and water, isopropyl alcohol, or skin preparation pads.

4. Attach the lead wires to the electrodes.

5. Apply the electrodes to the patient.
Electrode examples, left to right: arm clamp (reusable), Welsh cup (reusable), tab electrode (disposable), monitoring electrode (disposable).

- **For reusable electrodes**: Use electrode paste, gel, or cream to cover an area the size of each electrode but no larger. Secure the arm and leg clamps. Apply the Welsh cups (suction electrodes) to the chest.
- **For disposable tab electrodes**: Place the electrode tab between the “jaws” of the connector. Keep the tab flat. Verify that the metal portion of the connector makes contact with the skin side of the electrode tab.
- **For all disposable electrodes**: Lightly tug on the connector to ensure that the lead is securely attached. If the electrode comes off, replace it with a new electrode. If the connector comes off, reconnect it.

**View electrode placement**

1. Touch (Electrode placement button).
   
   The ECG preview screen appears.

![ECG preview screen](image)

2. Touch (torso button) to enlarge the lead placement image or touch to close it.

Use the New Patient tab to perform an Auto ECG test

⚠️ **CAUTION** Patient data is not saved until the ECG test is completed.

**Note** The ECG configuration settings can be changed in the Settings tab. The following settings may appear differently if the default settings have been modified.

**Note** Set the default patient entry tab to *New patient* in the Advanced settings.

   
   **Note** In a connected environment, with the default patient entry tab set to *Worklist* (in the Advanced settings), the worklist is downloaded from the Worklist server workstation and the Worklist tab appears. Touch the *New patient* tab to proceed with the New patient workflow.

2. Enter the following patient information as desired:
   - Patient ID. Touch OK.
   - Birth date. Touch OK.
   - Gender. Touch OK.
   - Last name. Touch OK.
   - First name. Touch OK.
   - Middle Initial. Touch OK.
   
   **Note** If the patient has a pacemaker touch *Pacemaker present*.

3. Touch 📅 (Next).

4. Enter the following patient information as desired:
   - Race
   - Height. Touch OK.
   - Weight. Touch OK.
   - Physician. Touch OK.
   - Comments. Touch OK.

5. Attach the leads to the patient.

6. (Optional) Adjust the waveforms, using the buttons to cycle through the following options:
   - leads displayed
   - ECG preview format
   - gain (size)
   - speed
   - filters
<table>

</tbody>
</table>

**Note** If desired, touch 🔄 (torso button) to enlarge the electrode placement (ECG preview) screen. Any flashing dots on the screen indicate unattached or poorly attached leads.

7. If an *Artifact* message appears, minimize the artifact, as described under Troubleshooting. You might need to ensure that the patient is comfortably warm, reprepare the patient’s skin, use fresh electrodes, or minimize patient motion.

8. Touch **Record** to perform the Auto ECG test.

   When the *Print preview* screen appears, touch **Next** to continue with the Auto ECG test or touch **Retest** to return to the previous screen.

9. If a *Waiting for 10 seconds of quality data* message appears, at least 10 seconds of ECG data have been collected with excessive artifact. Time requirements in the message may vary, based upon selected print format. Minimize the artifact, as described under Troubleshooting. Then wait for the test to record. If necessary, you can override the wait time and record the available data immediately, but the result might be an incomplete or poor-quality test.

10. After the test is completed, select the desired option: **Print**, **Save**, or **Rhythm**. If the *Auto Save* setting is turned off, touch **Save** to save the test. Select one of the following locations:

    - Local (internal memory)
- USB mass storage device (Any tests that you save to a USB mass storage device can be retrieved only from a CardioPerfect workstation.)
- Workstation (includes DICOM image server)
- Remote file location

11. Touch **Print** to print the test, touch **Rhythm** to start a continuous-print ECG, or touch **Exit**.

**WARNING** To avoid the risk of associating reports with the wrong patients, make sure that each test identifies the patient. Do not save a test to the patient record without patient identification associated with the report.

Use the Worklist tab to perform an Auto ECG test when connected to the Worklist server

**CAUTION** Patient data is not saved until the ECG test is completed.

**Note** The ECG configuration settings can be changed in the Settings tab. The following settings may appear differently if the default settings have been modified.

**Note** Connect the electrocardiograph to the same network as the DICOM Image server workstation and Worklist server by WiFi or Ethernet cable. If you need help, consult your network administrator.

**Note** Set the default patient entry tab to **Worklist** in the Advanced settings.

1. Touch **(Auto ECG)**.  
   The worklist is downloaded and the Worklist tab appears.

   **Note** If the patient that you are searching for is not listed in the downloaded worklist, exit the worklist and touch **(Auto ECG)** to refresh the worklist and to determine if a new order is awaiting processing from the server.

2. Touch within the Patient row to select the patient from the Worklist.
   If the patient has a pacemaker touch **Pacemaker present**.

3. Touch **Select** to start a test immediately, or touch **Review** to review or edit patient information. (Optional) Touch **(Next)** again.

4. Touch **Record** to perform the Auto ECG test.

5. When the **Print preview** screen appears, touch **Next** to record the test or touch **Retest** to start the test over.

6. After the test is complete, select the desired option: **Print**, **Save**, or **Rhythm**.
   If you are prompted to save the Auto ECG test, select Workstation. To save to another location, touch Local, USB mass storage device, or Remote file location and touch **Save**.

7. Touch **Exit** to return to the ECG home screen, or touch **Print** to print the ECG test, or touch **Rhythm** to perform a continuous-print ECG.
Perform an Auto ECG test using the Search tab

⚠️ CAUTION Patient data is not saved until the ECG test is completed.

**Note** The ECG configuration settings can be changed in the Settings tab. The following settings may appear differently if the default settings have been modified.

2. Search for patient.
   - The Search tab gives you access to patient data in the Saved tests directory or in a connected database (CardioPerfect workstation or EMR).
   - Touch the Search tab.
   - Enter the Patient ID or Last name.
   - Touch OK.
   - Touch Search.
   - Touch within the patient row.
   - **Note** If the patient has a pacemaker touch Pacemaker present.
   - Touch Select to start a test immediately.
   - Touch Review to review or edit patient information.
   - (Optional) Touch 🔄 (Next) again.
3. Attach the leads to the patient.
4. Touch Record to perform the Auto ECG test.
5. After the test completes, select the desired option: Print, Save, or Rhythm.
   - If you are prompted to save the Auto ECG test, select Local, USB mass storage device, Workstation, or Remote file location. Touch Save.

Perform a Rhythm ECG test after an Auto ECG test

1. Touch 🔄 (Auto ECG).
2. Enter the patient information.
   - Touch 🔄 (Next) to review or edit patient information.
   - (Optional) Touch 🔄 (Next) again.
3. Attach the leads to the patient.
4. Touch Record to perform the Auto ECG test.
5. After the test completes, touch Rhythm.
   - If you are prompted to save the Auto ECG test, select Local, USB mass storage device, Workstation, or Remote file location. Touch Save.
6. Touch Start to begin the Rhythm ECG test.
   - Touch Stop once the desired length of real-time rhythm strips have printed.
Assign an Auto ECG test to the worklist

You can assign an Auto ECG test to the worklist if patient demographic fields are left blank.

⚠️ **CAUTION** Patient data is not saved until the ECG test is completed.

**Note** If an Auto ECG test is performed without entering complete patient demographics, this test can be assigned to a patient in the worklist after the test is completed.

**Note** To use the assign feature the Test assignment on setting has to be turned on.

2. Touch ▶️ (Next).
3. (Optional) Touch ▶️ (Next).
4. Attach the leads to the patient.
5. Touch Record to perform the Auto ECG test.
6. When the Print Preview screen appears, touch Next to continue with the Auto ECG test or touch Retest to discard the test and return to the previous screen.
7. After the test completes, touch Assign.
8. Touch within the Patient row.
9. Touch Select.

If you are prompted to save the Auto ECG test, select Local, USB mass storage device, Workstation, or Remote file location. Touch Save.

⚠️ **WARNING** To avoid the risk of associating reports with the wrong patients, make sure that each test identifies the patient. If any report does not identify the patient, write the patient identification information on the report immediately following the ECG test.

10. Touch Print to print the test, touch Retest to discard the test and start over, touch Rhythm to start a continuous-print ECG, or touch Exit.
Saved tests

Search for saved tests

Search for Saved Tests by:
• Date
• Last name
• Patient ID
• Test type
  ○ All
  ○ Unconfirmed
  ○ Unprinted
  ○ Unsent

Once retrieved, Saved Tests can be deleted, printed, edited, or sent to a USB storage device, Workstation, or a Remote file location.

Manage the saved tests

Saved tests are a group of ECG tests that have been saved in the electrocardiograph memory.

With all electrocardiograph models, you can delete or print saved tests. You can also do the following:
• Edit the patient data in Saved Tests.
• Send saved tests to a USB mass-storage device, a remote file location, or to the Workstation. (Any tests that you send to a USB mass-storage device can be retrieved only from a CardioPerfect workstation.)

To manage saved tests
1. Touch the Saved tests tab.
2. Enter data into the Date from, Last name, or Patient ID field, or select the check box to search the Test Type for All, Unconfirmed, Unprinted, or Unsent tests.
3. Touch Search.
4. Select a single test or multiple tests.
5. Touch Delete, Print, Edit, or Send to manage the saved tests.
32  Saved tests

CP 150 12-lead resting electrocardiograph
Manage worklist

Download the worklist when connected to the Worklist server

The worklist is a group of patients whose demographic data has been downloaded into the electrocardiograph memory to be recalled for a test later that day. The worklist holds up to 50 patients.

When you perform an auto ECG, you can fill in the patient’s data from the Worklist server.

Note The ECG configuration settings can be changed in the Settings tab. The following settings may appear differently if the default settings have been modified.

Note Set the default patient entry tab to Worklist in the Advanced settings.

When the electrocardiograph is connected to the Worklist server, the worklist is downloaded when you touch (Auto ECG).

To manage the worklist

1. Touch Manage worklist.
2. Touch Download.
3. (Optional). Select a patient, or patients, from the list and touch Delete to delete those patients from the worklist.

Note When connected to the Worklist server, patients cannot be added manually so Add is not active.
Manage worklist

CP 150 12-lead resting electrocardiograph
Settings

View or change the ECG settings

The ECG settings control the content and format of your reports. These settings include a second Auto report format (Auto report) and a Rhythm format (Rhythm report), customizable patient data fields, and auto save options.

To view or change the settings

1. Touch the Settings tab. The ECG tab and the vertical ECG configuration tab appear.

Modify the settings as desired:

- Waveform centering on
- Baseline filter on
- Muscle filter on
- Save reminder on
- Default gain
- QTc method

Touch (Next).

Modify the settings as desired:

- Electrode labels
- Electrode configuration
- ECG interval
- Lead timing

Touch (Next).

Modify the settings as desired:

- Test assignment on
- Test assignment reminder on
- ECG preview arrangement

Touch the Rhythm report tab.
Modify the settings as desired:
• Default speed
• Print options

Touch (Next).

Modify the settings as desired:
• Rhythm leads 1 - 12

Touch the Auto report tab.

Modify the settings as desired:
• Report format
• Average cycles
• Print report automatically
• Rhythm leads 1 - 3

Touch (Next).

Modify the settings as desired:
• First name
• Abnormal ECG
• Unconfirmed report
• Interpretation
• Middle Initial
• Height
• Weight
• Race

Select:
• Age or Birth date

Note
DICOM-enabled connectivity requires a patient’s birth date. The Age/Birth date selection is disabled, the default setting becomes Birth date, once DICOM is activated. The Age/Birth date selection is active if the DICOM option is not installed or if it is disabled.

Touch (Next).

Modify the settings as desired:
• Extended measurements
• MEANS reason statements (optional purchase)
• Comments
• Physician
View or change the device information

To view or change the device information

1. Touch the **Settings** tab. The ECG tab appears.
2. Touch the **Device** tab.

**Modify the settings as desired:**
- LCD brightness
- Date
- Time
- Adjust clock for daylight saving time

Touch **Power down** to turn off the device.
Advanced settings

The Advanced tab provides password-protected access to the CP150’s Advanced settings (or Admin mode), enabling administrators, biomedical engineers, and/or service engineers to configure specific features. The Advanced tab also presents read-only information about the CP150.

Access Advanced settings

**Note**  You cannot access Advanced settings if a patient test is in progress.

1. From the **ECG Home** tab, touch the **Settings** tab.
2. Touch the **Advanced** tab.
3. Enter 6345 as the access code and touch **OK**.
   
   The General tab appears at the bottom of the screen and the Regional tab appears at the top of the screen.
4. Do one of the following:
   
   - To continue in the Advanced Settings, touch another tab.
   - To exit the Advanced Settings and return to the ECG Home tab, touch **Exit**.
   The ECG Home tab appears.

Regional

Specify regional settings

1. Access the Advanced Settings.
   a. Touch the **Settings** tab.
   b. Touch the **Advanced** tab.
   c. Enter the **Advanced settings code**.
   d. Touch **OK**.
   The General tab appears at the bottom of the screen and the Regional tab appears at the top of the screen.
2. Specify settings.

<table>
<thead>
<tr>

### Device

#### Specify the device settings

1. **Access the Advanced Settings.**
   a. Touch the **Settings** tab.
   b. Touch the **Advanced** tab.
   c. Enter the **Advanced settings code**.
   d. Touch **OK**.
      
      The General tab appears at the bottom of the screen and the Regional tab appears at the top of the screen.

2. **Touch the **Device** tab.**
   - From the Printer drop-down menu, select a PDF or printer option from the list:
     - Internal
     - PDF to USB
     - PDF to remote file location
     - Internal and PDF to USB
     - Internal and PDF to remote file location
   - From the Default patient entry drop-down menu, select New Patient or Worklist.
   - Select or deselect the HR beep on.
   - Select or deselect the Error beep on.
   - Turn Caps lock on or off.

3. **Do one of the following:**
   - To continue in the Advanced Settings, touch another tab.
   - To exit the Advanced Settings and return to the Home tab, touch **Exit**.
Data management

Specify data management settings

1. Access the Advanced Settings.
   a. Touch the Settings tab.
   b. Touch the Advanced tab.
   c. Enter the Advanced settings code.
   d. Touch OK.

   The General tab appears on the bottom of the screen and the Regional tab appears on the top of the screen.

2. Touch the Data Management tab.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Action/Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto save preferences</td>
<td>Set the default location for Auto save. Off, Local, USB mass storage device, Workstation, or Remote file location.</td>
</tr>
<tr>
<td>Data conflict (Memory full) options</td>
<td>Set the Memory full options to Delete Oldest test or Prompt user for test deletion preferences.</td>
</tr>
<tr>

<tr>
<td>Remote file location</td>
<td>Use the keyboard to add the remote file server address, user ID, and password.</td>
</tr>
<tr>
<td></td>
<td>Touch Test remote folder to test the server connection.</td>
</tr>
</tbody>
</table>

4. Do one of the following:
   • To continue in the Advanced Settings, touch another tab.
   • To exit the Advanced Settings and return to the Home tab, touch Exit.

Ownership

Specify ownership settings

1. Access the Advanced Settings.
   a. Touch the Settings tab.
   b. Touch the Advanced tab.
   c. Enter the Advanced settings code.
   d. Touch OK.

   The General tab appears on the bottom of the screen and the Regional tab appears on the top of the screen.

2. Touch the Ownership tab.

**Setting** | **Action/Description**
---|---
Practice ID | Use the keyboard to add the Practice identification. Touch **OK**.
Contact information | Use the keyboard to add the Contact information. Touch **OK**.
Device ID | Use the keyboard to add Device identification. Touch **OK**.

4. Do one of the following:
   - To continue in the Advanced Settings, touch another tab.
   - To exit the Advanced Settings and return to the Home tab, touch **Exit**.

### Start Demo

#### Start the demo mode

1. Access the Advanced Settings.
   a. Touch the **Settings** tab.
   b. Touch the **Advanced** tab.
   c. Enter the **Advanced settings code**.
   d. Touch **OK**.

   The General tab appears on the bottom of the screen and the Regional tab appears on the top of the screen.

2. Touch the **Demo** tab.

3. Touch **Start Demo** to put the CP150 in demonstration mode.

   Once the demonstration mode is complete, the device returns to the Home tab.

### Network

#### View advanced CP150 information

The Advanced Settings screen shows the CP150’s software version, battery charge state, Ethernet and wireless radio MAC and IP addresses, network, server and access point information, session information, and more.

#### View Radio and Ethernet status

**Note** This task is applicable only to devices that have a radio installed and an activated license.

1. Access the Advanced Settings.
   a. Touch the **Settings** tab.
   b. Touch the **Advanced** tab.
   c. Enter the **Advanced settings code**.
   d. Touch **OK**.
The General tab appears at the bottom of the screen and the Regional tab appears at the top of the screen.

2. Touch the **Network** tab.
   
The Status tab appears at the top of the screen.

3. Touch the vertical **Radio** or **Ethernet** tab to view the wireless Radio or Ethernet IP, MAC address, and Status information.

4. Touch **(Next)** to view more Ethernet or Radio information settings.
   
   Information in the Status tab updates only when the device is connected to a wired or wireless network.

5. Do one of the following:
   
   • To continue in the Advanced Settings, touch another tab.
   
   • To exit the Advanced Settings and return to the Home tab, touch **Exit**.

### Specify Ethernet settings

You can connect a CP150 electrocardiograph to a Welch Allyn CardioPerfect workstation or a network server via an Ethernet cable. Software provided in the CP 50/150 connectivity kit is required to communicate with the workstation. Cables longer than 3 meters have not been verified for use with the electrocardiograph. Do not use cables longer than 3 meters.

1. Access the Advanced Settings.
   
   a. Touch the **Settings** tab.
   
   b. Touch the **Advanced** tab.
   
   c. Enter the **Advanced settings code**.
   
   d. Touch **OK**.

   The General tab appears at the bottom of the screen and the Regional tab appears at the top of the screen.

   If connecting the CP150 electrocardiograph to a Welch Allyn CardioPerfect workstation, connect the electrocardiograph to the same network as the workstation. If you need help, consult your network administrator.

   ![Image of CP150 electrocardiograph]

2. Touch the **Network** tab.

3. Touch the **Ethernet** tab.

4. Specify settings.

DNS Server 2

5. Do one of the following:
   • To continue in the Advanced Settings, touch another tab.
   • To exit the Advanced Settings and return to the Home tab, touch Exit.

Specify radio settings

Note Your model might not contain all of these features.

Note Radio features are enabled through hardware detection.

1. Access the Advanced Settings.
   a. Touch the Settings tab.
   b. Touch the Advanced tab.
   c. Enter the Advanced settings code.
   d. Touch OK.

2. Touch the Network tab.

3. Touch the Radio tab to access WiFi and Radio settings.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Action/Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable radio</td>
<td>Enable the radio for device communications. When disabled, the radio is not available.</td>
</tr>

<td>Identification name of an 80211 wireless network. Touch and enter the service set identifier (SSID- the name of the access point). Enter a maximum of 32 characters.</td>
</tr>
<tr>
<td>Radio band</td>
<td>Select the radio band. ABGN, ABG, AN or A.</td>
</tr>
</tbody>
</table>
| Update radio | Touch Update radio to activate all new radio settings not selected previously.  
   Note None of the changed radio settings take effect until you touch Update radio. |
5. Do one of the following:
   • To continue in the Advanced Settings, touch another tab.
   • To exit the Advanced Settings and return to the Home tab, touch Exit.

Specify radio security settings

Note Your model might not contain all of these features.

1. In Advanced settings, touch the Network > Radio > Security tabs.
2. Select the encryption method to secure data transfer from the device.
   
   Note Network server certificates are required for all EAP security options. Use the Welch Allyn Service Tool to load these certificates.

<table>
<thead>
<tr>

   - To continue in the Advanced Settings, touch another tab.
   - To exit the Advanced Settings and return to the Home tab, touch **Exit**.

### Specify the DICOM Worklist and Image Server settings

**Note** Your model might not contain all of these features.

**Note** This task is applicable only to devices that have an activated DICOM license.

1. Access the Advanced Settings.
   a. Touch the **Settings** tab.
   b. Touch the **Advanced** tab.
   c. Enter the **Advanced settings code**.
   d. Touch **OK**.

   The General tab appears at the bottom of the screen and the Regional tab appears at the top of the screen.

2. Touch the **Network** tab.
3. Touch the **Server** tab.

   The Connex and DICOM vertical tabs appear.

4. Touch the **DICOM** tab to specify the DICOM settings.
### Setting
#### Action/Description
- **Enable worklist downloads and ECG DICOM uploads**
  - Select this option to enable DICOM functionality.
- **Local AE Title**
  - Touch \[button\] and enter the AE Title for the device (Example: CP150). Enter a maximum of 16 characters.

5. Touch \[button\] (Next) to view more DICOM Worklist Server settings. The DICOM Worklist Server configuration settings appear.

### Setting
#### Action/Description
- **Server AE Title**
  - Touch \[button\] and enter the AE Title for the server. Enter a maximum of 16 characters.
- **IP address**
  - Touch \[button\] in the server IP address fields and enter the IP address.
- **Port**
  - Select the port. Touch \[button\] in the Port entry field and enter the port number. (The port number is set by the network administrator.)
- **Location filter**
  - Use the drop-down menu to turn the filter off. Or filter by Local AE Title or Device ID / Practice ID.
- **Test Connection**
  - Touch Test Connection to test the connection to the DICOM Worklist Server.

6. Touch \[button\] (Next) to view the DICOM Image Server settings. The DICOM Image Server configuration settings appear.

7. Connect to the DICOM Image Server.

### Action/Description
- **Server AE Title**
  - Touch \[button\] and enter the AE Title for the DICOM Image Server. Enter a maximum of 16 characters.
- **IP address**
  - Touch \[button\] in the server IP address fields and enter the IP address.
- **Port**
  - Select the port. Touch \[button\] in the Port entry field and enter the port number. (The port number is set by the network administrator.)
- **ECG waveform storage**
  - Select 12-Lead or General waveform storage format. **Note** When the selected ECG waveform is set to the 12-Lead format, storage reverts to the General waveform if the number of samples is larger than permitted for the 12-Lead format. The 12-Lead storage reverts to the General waveform only if the Auto Report is set to one of the 3x4 formats with the 5-second option and the ECG test is for a pediatric patient.
- **Coding scheme**
  - Select SCPECG or MDC. **Note** See the CP150 Conformance Statement for Coding scheme definitions.
- **Test Connection**
  - Touch Test Connection to test the connection to the DICOM Image Server.
8. Do one of the following:
   • To continue in the Advanced Settings, touch another tab.
   • To exit the Advanced Settings and return to the Home tab, touch Exit.

Service

The Service tab presents numerous settings and controls typically accessed by authorized service or biomedical engineering personnel to configure, maintain, test, and update the device. For example, the Service tab enables authorized users to save device configurations to a USB flash drive and then load saved configurations to other devices. Systems and devices configured with the PartnerConnect™ service feature also have access to remote diagnostics, troubleshooting, and software upgrades.

For a description of service-related advanced settings, see the service manual for this product.

View or change the Service settings

To view or change the settings

1. From the ECG Home tab, touch the Settings tab.
2. Touch the Advanced tab.
3. Enter 6345 as the access code and touch OK. The General tab appears at the bottom of the screen and the Regional tab appears at the top of the screen.
4. Touch the Service tab.

Restore factory defaults

Note Your model might not contain all of these features.

• All settings
• Printer page count
• Calibration gain
• Radio settings

Device configuration

• Save to USB
• Configure from USB
• Print all settings

Update software

• Update

Upgrade your existing CP 150 device software version through the Welch Allyn Service Tool

Note A USB cable is required to perform the software upgrade.

Note Connect the CP 150 to an AC power outlet before upgrading the software.

1. Download the Welch Allyn Service Tool and Partner Connect and install on your PC.
2. Follow the instructions to set up a user name and password.
3. Plug your CP 150 device into a USB port on your PC running the Welch Allyn Service Tool and turn on the device. Plug your CP 150 device into AC power.

4. If the Welch Allyn Service Tool is not still open, go to the Windows Start menu, and then select All Programs > Welch Allyn > Welch Allyn Service Tool.

5. Log in to the Welch Allyn Service Tool.

6. Highlight the CP150 to select it from the Device list.

7. Click Select.

8. Click the Upgrade tab and then click Check for new upgrades.

9. Highlight the device software (for example, the firmware Host Controller 2.XX.XX) to select it from the list.

   The device’s current software (firmware) version shows in the Device firmware column and the latest available version shows in the Available firmware column.

10. Click Upgrade all. Optional, click Read release notes to view upgrade details.

11. At the Upgrade Host Controller screen, click Yes at the prompt: Do you want to continue?

   CAUTION Do not power off the CP 150 device during the update.
The upgrade process may take up to fifteen minutes to cycle through the complete upgrade. During the upgrade process, the progress indicator shows the percentage complete status, however, it is also normal to see both a blank screen and a reboot screen that appear several times before the CP 150 device automatically reboots.

Activate the DICOM license through the Welch Allyn Service Tool

A USB cable is required to perform the DICOM upgrade.

Contact Welch Allyn to purchase the DICOM license. DICOM installation requires a DICOM license that needs to be authorized through the Welch Allyn Service Tool. When you purchase a licensed upgrade or option for a supported product, you also receive an authorization code from Welch Allyn. Use this code to activate the new feature or features.

1. Download the Welch Allyn Service Tool and Partner Connect and install on your PC.
2. Plug your CP 150 device into a USB port on your PC running the Welch Allyn Service Tool and turn on the device.
3. If the Welch Allyn Service Tool is not still open, go to the Windows Start menu, and then select All Programs > Welch Allyn > Welch Allyn Service Tool.
4. Click Add new features.
5. Enter the DICOM code into the authorization code field.
6. Click Activate.
At the Install License screen, click **OK**.

⚠️ **CAUTION** Do not disconnect or power off the device during the license installation.

7. Once you see the *Add new features* screen confirming the license installation, click **Close**.

8. For the license upgrade to take effect, press and hold the power button for about 8 seconds to reboot the device.
Maintenance

Cleaning the equipment

**WARNING** Keep the electrocardiograph, reusable electrodes, and the patient cable clean. Patient contact with contaminated equipment can spread infection.

**CAUTION** Never let soap or water come into contact with the electrocardiograph’s internal printer, connectors, or jacks.

**CAUTION** Never immerse the electrocardiograph or the patient cable in liquid. Never autoclave or steam clean the electrocardiograph or the patient cable. Never pour alcohol directly on the electrocardiograph or the patient cable, and never soak any components in alcohol. If any liquid enters the electrocardiograph, remove the electrocardiograph from service, and have it inspected by a qualified service person before using it again.

**Note** The patient cables should be cleaned after each use.

Clean on a routine basis according to your facility’s protocols and standards or local regulations.

The following agents are compatible with the electrocardiograph:

- 70 percent isopropyl alcohol
- 10 percent chlorine bleach solution

**CAUTION** When cleaning the device, avoid using cloths or solutions that include quaternary ammonium compounds (ammonium chlorides) or glutaraldehyde-based disinfectants.

**Note** Disinfect according to your facility’s protocols and standards or local regulations.

To clean the equipment (monthly or more often if needed)

1. Disconnect the power plug from the AC outlet.
2. Turn off the electrocardiograph. (Press and hold the power button for at least six seconds until the screen goes blank.)

3. Dampen a cloth with any of the acceptable cleaning solutions, and wipe the exterior of the patient cable and electrocardiograph. Dry all components with a clean, soft cloth, or paper towel.

4. Before you turn on the electrocardiograph again, wait at least 10 minutes for all traces of liquid to evaporate.

70 percent isopropyl alcohol

Wipe the electrocardiograph with a clean cloth slightly dampened with 70 percent isopropyl alcohol.

10 percent chlorine bleach solution

1. Wipe the electrocardiograph with a clean cloth slightly dampened with a 10 percent bleach and water solution. Follow the cleaning agent manufacturer’s guidelines.
2. Rinse with a clean cloth slightly dampened with water that meets EP and USP quality standards.
3. Allow the electrocardiograph surface to dry for a minimum of 10 minutes before using the electrocardiograph.

Inspecting the equipment

Perform the following inspections daily.
- Check for cracked or broken patient cable, patient electrodes, power cord, communications cables, display, and enclosure.
- Check for bent or missing pins on all cables.
- Check all cable and cord connections; reseat if any connectors are loose.

Testing the electrocardiograph

Welch Allyn recommends verifying proper operation of the electrocardiograph once a year to ensure reliability. See Verifying proper operation.

Whenever the electrocardiograph is serviced or whenever problems are suspected, verify continued electrical safety of the device using IEC 60601-1 or ANSI/AAMI ES1 methods and limits.

**WARNING** Only qualified service personnel should perform leakage current tests.

Test for the following:
- Patient leakage current
• Chassis leakage current
• Earth leakage current
• Dielectric strength (AC and patient circuits)

Replacing the battery

Replace the battery under these circumstances:
• It loses its charge quickly.
• You have charged it, and the electrocardiograph still does not turn on when unplugged.

The first time that you press the power button after installing a new battery, the electrocardiograph goes through some diagnostic tests that cause it to take longer than usual to power up.

Discard the old battery appropriately. Contact your local authorities concerning recycling.

To replace the battery

Replacing the AC fuses

You might need to replace one or both of the AC fuses if the AC power indicator does not light up when the electrocardiograph is connected to AC power.
WARNING  Failure to unplug could result in electrocution.

To replace the AC fuses

If either fuse is dark or has a broken wire, replace the fuse. Line up the fuse case with the opening; it goes in only one way.

Storing the equipment

When storing the electrocardiograph, cords, and accessories, observe the environmental storage conditions that are identified in the product specifications.

Disposing of electronic equipment

This product and its components must be disposed of according to local laws and regulations. Do not dispose of this product as unsorted municipal waste.

For more specific disposal or compliance information, see www.welchallyn.com/weee, or contact Welch Allyn Customer Service.
Troubleshooting

Lead-quality problems

“Artifact” message on the screen

Artifact is signal distortion that makes it difficult to accurately discern the waveform morphology.

Causes
• The patient was moving.
• The patient was shivering.
• There is electrical interference.

Actions
See actions for wandering baseline, muscle tremor, and AC interference.

Wandering baseline

Wandering baseline is an upward and downward fluctuation of the waveforms.

Causes
• Electrodes are dirty, corroded, loose, or positioned on bony areas.
• The electrode gel is insufficient or dried.
• The patient has oily skin or used body lotions.
• Rising and falling of chest during rapid or apprehensive breathing.

Actions
• Clean the patient’s skin with alcohol or acetone.
• Reposition or replace the electrodes.
• Verify that the patient is comfortable, warm, and relaxed.
• If wandering baseline persists, turn the baseline filter on.
Muscle tremor

Causes
- The patient is uncomfortable, tense, nervous.
- The patient is cold and shivering.
- The exam bed is too narrow or short to comfortably support arms and legs.
- The arm or leg electrode straps are too tight.

Actions
- Verify that the patient is comfortable, warm, and relaxed.
- Check all electrode contacts.
- If interference persists, turn the muscle-tremor filter on. If interference still persists, the problem is probably electrical in nature. See the suggestions for reducing AC interference (in a related troubleshooting tip).

AC interference

AC interference superimposes even-peaked, regular voltage on the waveforms.

Causes
- The patient or technician was touching an electrode during recording.
- The patient was touching a metal part of an exam table or bed.
- A lead wire, patient cable, or power cord are broken.
- Electrical devices in the immediate area, or lighting, or wiring concealed in walls or floors are interfering.
- An electrical outlet is improperly grounded.
- The AC filter is turned off or set incorrectly.

Actions
- Verify that the patient is not touching any metal.
- Verify that the AC power cable is not touching the patient cable.
- Verify that the proper AC filter is selected.
- If interference persists, unplug the electrocardiograph from AC power and run it on the battery. If this solves the problem, you’ll know that the noise was introduced through the power line.
- If interference still persists, the noise may be caused by other equipment in the room or by poorly grounded power lines. Try moving to another room.
Lead alert or square wave

A dot might be flashing on the lead-status screen. Or one or more leads might appear as a square wave.

**Causes**
- Electrode contact might be poor.
- A lead might be loose.
- A lead might be defective.

**Actions**
- Replace the electrode.
- Verify that the patient’s skin has been properly prepared.
- Verify that electrodes have been properly stored and handled.
- Replace the patient cable.
System problems

The electrocardiograph won’t turn on when it is plugged in

**Causes**
- The AC power connection is faulty.
- An AC fuse is blown.
- There is no AC power.

**Actions**
- Check the AC power source.
- Check the AC fuses.

The electrocardiograph won’t turn on when it is unplugged

**Causes**
- The battery is disconnected or incorrectly connected.
- The battery is low, not charging, depleted, or bad.

**Actions**
- Check the battery connections.
- Recharge the battery.
- Replace the battery.

The electrocardiograph shuts down during printing

**Causes**
- The battery is low or bad.

**Actions**
- Recharge the battery.
- Replace the battery.

The electrocardiograph prints fewer than 10 reports on a full battery charge

**Causes**
- The battery is degraded.

**Actions**
- Replace the battery.
The electrocardiograph does not respond when you press buttons or touch the screen

Causes
- The electrocardiograph is frozen.

Actions
- Reset the electrocardiograph by pressing and holding the power button for at least six seconds until the screen goes blank. Press the power button again. The electrocardiograph goes through some diagnostic tests that cause it to take longer than usual to power up.
- Touch the **Settings** tab. Touch the **Advanced** tab. Touch the **Power down** button. The electrocardiograph goes through some diagnostic tests that cause it to take longer than usual to power up.

Note For more troubleshooting guidelines, see the service manual.

⚠️ **CAUTION** The service manual is for use only by qualified service personnel who understand technical English.
Service policy

All repairs on products under warranty must be performed by Welch Allyn or by a service provider authorized by Welch Allyn. Unauthorized repairs will void the warranty. In addition, whether or not covered under warranty, any product repair should be performed exclusively by Welch Allyn or by a service provider that has been authorized by Welch Allyn.

If the product fails to function properly—or if you need assistance, service, or spare parts—contact the nearest Welch Allyn Technical Support Center.

Before contacting Welch Allyn, try to duplicate the problem, and check all accessories to ensure that they are not causing the problem. When calling, please be prepared to provide:

• Product name, model number, and serial number of your product.
• Complete description of the problem.
• Complete name, address and phone number of your facility.
• For out-of-warranty repairs or spare parts orders, a purchase order (or credit card) number.
• For parts orders, the required spare or replacement part numbers.

If your product requires warranty, extended warranty, or non-warranty repair service, please call first the nearest Welch Allyn Technical Support Center. A representative will assist you troubleshooting the problem and will make every effort to solve it over the phone, avoiding potential unnecessary return of your product.

In case a return cannot be avoided, the representative will record all necessary information and will provide a Return Material Authorization (RMA) number, as well as the appropriate return address. An RMA number must be obtained prior to any return.

If you have to return your product for service, follow these recommended packing instructions:

• Remove all hoses, cables, sensors, power cords, and other accessories (as appropriate) before packing, unless you suspect they are associated with the problem.
• Wherever possible use the original shipping carton and packing materials.
• Include a packing list and the Welch Allyn Return Material Authorization (RMA) number.

It is recommended that all returned goods be insured. Claims for loss or damage to the product must be initiated by the sender.
Limited warranty

Welch Allyn warrants the product to be free of defects in material and workmanship and to perform in accordance with manufacturer’s specifications for the period of three years from the date of purchase from Welch Allyn or its authorized distributors or agents.

The warranty period shall start on the date of purchase. The date of purchase is: 1) the invoiced ship date if the device was purchased directly from Welch Allyn, 2) the date specified during product registration, 3) the date of purchase of the product from a Welch Allyn authorized distributor as documented from a receipt from said distributor.

This warranty does not cover damage caused by: 1) handling during shipping, 2) use or maintenance contrary to labeled instructions, 3) alteration or repair by anyone not authorized by Welch Allyn, and 4) accidents.

The product warranty is also subject to the following terms and limitations: Accessories are not covered by the warranty. Refer to the directions for use provided with individual accessories for warranty information.

Shipping cost to return a device to a Welch Allyn Service center is not included.

A service notification number must be obtained from Welch Allyn prior to returning any products or accessories to Welch Allyn’s designated service centers for repair. To obtain a service notification number, contact Welch Allyn Technical Support.

THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. WELCH ALLYN’S OBLIGATION UNDER THIS WARRANTY IS LIMITED TO REPAIR OR REPLACEMENT OF PRODUCTS CONTAINING A DEFECT. WELCH ALLYN IS NOT RESPONSIBLE FOR ANY INDIRECT OR CONSEQUENTIAL DAMAGES RESULTING FROM A PRODUCT DEFECT COVERED BY THE WARRANTY.
General compliance and standards

The CP150 complies with the following standards:

<table>
<thead>

General radio compliance

The wireless features of this device must be used in strict accordance with the manufacturer’s instructions as described in the user documentation that comes with the device.

This device complies with Part 15 of the FCC rules and with the rules of the Canadian ICES-003 as described below.

Federal Communications Commission (FCC)

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy. If not installed and used in accordance with the instructions, it may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, then the user is encouraged to try and correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna

Channel restrictions in the 5-GHz band are determined by country.
To ensure compliance with local regulations, be sure the correct country in which the access point is installed is selected. This product can be used with the following restriction(s):

Norway - Does not apply for the geographical area within a radius of 20 km from the center of Ny-Ålesund.

France - Outdoor use is limited to 10 mW EIRP within the band 2454 to 2483.5 MHz.

Note

Effective Isotropic Radiated Power (EIRP).

Note

Some countries restrict the use of 5-GHz bands. The 802.11a radio in the CP 150 uses only the channels indicated by the access point with which the radio associates. The hospital IT department must configure access points to operate with approved domains.

Class A Equipment (Industrial Broadcasting & Communication Equipment) A급 기기 (업무용 방송 통신기자재)
• Increase the distance between the equipment and the receiver
• Connect the equipment to an outlet on a circuit different from that to which the receiver is connected
• Consult the dealer or an experienced radio/TV technician for help

The user may find the following booklet prepared by the Federal Communications Commission helpful:

_The Interference Handbook_

Welch Allyn is not responsible for any radio or television interference caused by unauthorized modification of the devices included with this Welch Allyn product, or the substitution or attachment of connecting cables and equipment other than specified by Welch Allyn.

The correction of interference caused by such unauthorized modification, substitution, or attachment will be the responsibility of the user.

**Industry Canada (IC) emissions**

This device complies with RSS 210 of Industry Canada.

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of this device.

L’utilisation de ce dispositif est autorisée seulement aux conditions suivantes: (1) il ne doit pas produire de brouillage et (2) l’utilisateur du dispositif doit être prêt à accepter tout brouillage radioélectrique reçu, même si ce brouillage est susceptible de compromettre le fonctionnement du dispositif.

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conform à la norme NMB-003 du Canada.

**RF Radiation Hazard Warning**

Using higher gain antennas and types of antennas not certified for use with this product is not allowed. The device shall not be co-located with another transmitter.

Cet avertissement de sécurité est conforme aux limites d’exposition définies par la norme CNR-102 at relative aux fréquences radio.

This radio transmitter (Contains IC ID: 3147A-WB45NBT) has been approved by Industry Canada to operate with the antenna types listed in table above with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

Le présent émetteur radio (Contains IC ID: 3147A-WB45NBT) a été approuvé par Industrie Canada pour fonctionner avec les types d’antenne énumérés ci-dessous et ayant un gain admissible maximal et l’impédance requise pour chaque type d’antenne. Les types d’antenne non inclus dans cette liste, ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l’exploitation de l’émetteur.
Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication.

Conformément à la réglementation d’Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d’un type et d’un gain maximal (ou inférieur) approuvé pour l’émetteur par Industrie Canada. Dans le but de réduire les risques de brouillage radioélectrique à l’intention des autres utilisateurs, il faut choisir le type d’antenne et son gain de sorte que la puissance isotrope rayonnée équivalente (p.i.r.e.) ne dépasse pas l’intensité nécessaire à l’établissement d’une communication satisfaisante.

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d’Industrie Canada applicables aux appareils radio exempts de licence. L’exploitation est autorisée aux deux conditions suivantes : (1) l’appareil ne doit pas produire de brouillage, et (2) l’utilisateur de l’appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d’en compromettre le fonctionnement.

EMC guidance and manufacturer’s declarations

EMC compliance

Special precautions concerning electromagnetic compatibility (EMC) must be taken for all medical electrical equipment. This device complies with IEC 60601-1-2:2014/EN 60601-2-1:2015.

- All medical electrical equipment must be installed and put into service in accordance with the EMC information provided in this Directions for use.
- Portable and mobile RF communications equipment can affect the behavior of medical electrical equipment.

The device complies with all applicable and required standards for electromagnetic interference.

- It does not normally affect nearby equipment and devices.
- It is not normally affected by nearby equipment and devices.
- It is not safe to operate the monitor in the presence of high-frequency surgical equipment.
- However, it is good practice to avoid using the device in extremely close proximity to other equipment.

**Note**

The CP 150 12-lead resting electrocardiograph has essential performance requirements associated with electrocardiograph measurement. In the presence of EM disturbances, the device will display an error code. Once the EM disturbances stop the CP 150 12-lead resting electrocardiograph will self-recover and perform as intended.
WARNING The use of the CP 150 12-lead resting electrocardiograph adjacent to or stacked with other equipment or medical electrical systems should be avoided because it could result in improper operation. If such use is necessary, the CP 150 12-lead resting electrocardiograph and other equipment should be observed to verify that they are operating normally.

WARNING Use only Accessories recommended by Welch Allyn for use with the CP 150 12-lead resting electrocardiograph. Accessories not recommended by Welch Allyn may affect the EMC emissions or immunity.

WARNING Maintain minimum separation distance between the CP 150 12-lead resting electrocardiograph and portable RF communication equipment. Performance of the CP 150 12-lead resting electrocardiograph may be degraded if proper distance is not maintained.

Emissions and immunity information

### Electromagnetic emissions

The CP 150 12-lead resting electrocardiograph is intended for use in the electromagnetic environment specified below. The customer or user of the CP 150 12-lead resting electrocardiograph should assure that it is used in such an environment.

WARNING This equipment/system is intended for use by healthcare professionals only. This equipment/system may cause radio interference or may disrupt the operation of nearby equipment. It may be necessary to take mitigation measures, such as re-orienting or relocating the CP 150 12-lead resting electrocardiograph or shielding the location.

---

*The CP 150 12-lead resting electrocardiograph contains a 5-GHz orthogonal frequency-division multiplexing transmitter or a 2.4-GHz frequency hopping spread-spectrum transmitter for the purpose of wireless communication. The radio is operated according to the requirements of various agencies, including FCC 47 CFR 15.247 and Radio Equipment Directive 2014/53/EU. The transmitter is excluded from the EMC requirements of 60601-1-2, but should be considered when addressing possible interference issues between this and other devices.*
Electromagnetic immunity

The CP 150 12-lead resting electrocardiograph is intended for use in the electromagnetic environment specified below. The customer or the user of the CP 150 12-lead resting electrocardiograph should assure that it is used in such an environment.

</tr>
<tr>
<td></td>
<td>80 MHz to 800 MHz</td>
<td>10 V/M, 800 MHz to 2.7 GHz</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>800 MHz to 80 MHz</td>
<td></td>
</tr>
</tbody>
</table>

\[
d = \left(\frac{P}{E}\right)^{1/2}
\]

where \( P \) is the maximum output power rating of the transmitter in watts (W) and \( d \) is the recommended separation distance in meters (m). Field strengths from fixed RF transmitters, as determined by an electromagnetic site survey, should be less than the compliance level in each frequency range. Interference may occur in the vicinity of equipment marked with the following symbol:

Note 1: At 80 MHz and 800 MHz, the higher frequency range applies.

Note 2: These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects, and people.

Field strengths from fixed transmitters, such as base stations for radio (cellular/cordless) telephones and land mobile radios, amateur radio, AM and FM radio broadcast, and TV broadcast cannot be predicted theoretically with accuracy. To assess the electromagnetic environment due to fixed RF transmitters, an electromagnetic site survey should be considered. If the measured field strength in the location in which the CP 150 12-lead resting electrocardiograph is used exceeds the applicable RF compliance level above, the CP 150 12-lead resting electrocardiograph should be observed to verify normal operation. If abnormal performance is observed, additional measures may be necessary, such as reorienting or relocating the CP 150 12-lead resting electrocardiograph.

Over the frequency range 150 kHz to 80 MHz, field strengths should be less than 3 V/m.
Recommended separation distances between portable and mobile RF communications equipment and the CP 150 12-lead resting electrocardiograph

The CP 150 12-lead resting electrocardiograph is intended for use in an electromagnetic environment in which radiated RF disturbances are controlled. The customer or user of the CP 150 12-lead resting electrocardiograph can help prevent electromagnetic interference by maintaining a minimum distance between portable and mobile RF communications equipment (transmitters) and the CP 150 12-lead resting electrocardiograph as recommended below, according to the maximum output power of the communications equipment.

<table>
<thead>
<tr>
<th>Rated max. output power of transmitter (W)</th>
<th>150 kHz to 80 MHz outside ISM bands</th>
<th>150 kHz to 80 MHz in ISM bands</th>
<th>80 MHz to 800 MHz</th>
<th>800 MHz to 2.7 GHz</th>
</tr>
</thead>

</tbody>
</table>

For transmitters rated at a maximum output power not listed above, the recommended separation distance in meters (m) can be estimated using the equation applicable to the frequency of the transmitter, where \(P\) is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer.

Note 1: At 80 MHz and 800 MHz, the separation distance for the higher frequency range applies.

Note 2: These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects, and people.

</tbody>
</table>

a For some services, only the uplink frequencies are included.
b The carrier shall be modulated using a 50 percent duty cycle square wave signal.
c As an alternative to FM modulation, 50 percent pulse modulation at 18 Hz may be used because while it does not represent actual modulation, it would be worst case.

* If you print at a high gain setting, the waveform or calibration marks might be clipped. This clipping does not comply with clause 51.103.1 of the IEC/EN 60601-2-51 standard. Use a lower gain setting to observe the full waveform.

** Per AAMI EC11:1991/®(2007 Diagnostic Electrocardiographic Devices, Section 3.1.2.1 Disclosure of cautionary information/ performance characteristics paragraph c) Accuracy of input signal reproduction, the manufacturer shall disclose the methods used to establish overall system error and frequency response. Welch Allyn has used methods A & D, as prescribed in section 3.2.7.2 and 4.2.7.2 of this same standard, to verify overall system error and frequency response. Because of the sampling characteristics and the asynchronism between sample rate and signal rate, digital ECG systems such as the CP 150 may produce a noticeable modulating effect from one cycle to the next, particularly in pediatric recordings. This phenomenon is not physiologic.

*** Disposable electrodes from Welch Allyn shall be used during patient defibrillation.

Specifications are subject to change without notice.
